# 2 circuits in 1 mo

## ElfaPlus Unibis™: the solution

Unibis™ compact MCB's are one of the latest introductions in the ElfaPlus range and are developed to **reduce the size of the distribution board to the minimum**.  
The performances are upgraded to **10kA**.

**High performance clips**

To fix the MCB to the DIN rail.

**High performance torque**

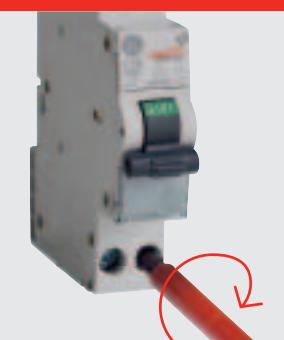

Up to 3Nm.

**Easy to replace**

Double clips make it easy to replace the MCB's, especially when a busbar is installed.

**Userfriendly**

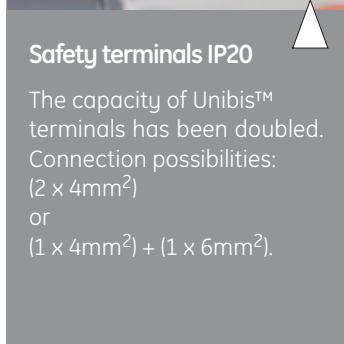

All screws are on the same level to work fast and easy.

**Green or red flag on toggle with isolation applications**

Correct information about the real position. Minimum 5mm distance between open contacts is ensured.

**Part of the family**

Unibis™ MCB's fit perfectly in the Redline range.

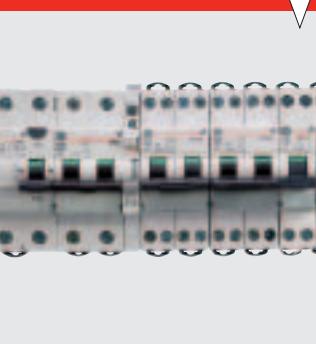

**Safety terminals IP20**

The capacity of Unibis™ terminals has been doubled. Connection possibilities: (2 x 4mm<sup>2</sup>) or

(1 x 4mm<sup>2</sup>) + (1 x 6mm<sup>2</sup>).

**Full functionality**

A small auxiliary contact is the interface to the complete functionality of the Redline auxiliaries and accessories.

## Characteristics according to IEC/EN 60898-1

Miniature Circuit Breakers (MCB) are intended for the protection of wiring installations against both overloads and short-circuits in domestic or commercial wiring installations where operation is possible by uninstructed people.

### Magnetic release

An electromagnet with plunger ensures instantaneous tripping in the event of short-circuit. The standard distinguishes two different types, following the current for instantaneous release: type B and C.

Icn	Test current (A)	Tripping time	Applications
<b>B</b>	$3 \times I_n$	$0.1 < t < 45s (I_n \leq 32A)$	Only for resistive loads such as:
	$5 \times I_n$	$0.1 < t < 90s (I_n > 32A)$ $t < 0.1s$	- electrical heating - water heater - stoves
<b>C</b>	$5 \times I_n$	$0.1 < t < 15s (I_n \leq 32A)$	Usual loads such as:
	$10 \times I_n$	$0.1 < t < 30s (I_n > 32A)$ $t < 0.1s$	- lighting - socket-outlets - small motors

### Thermal release

The release is initiated by a bimetal strip in case of overload. The standard defines the range of releases for specific overload values.

Reference ambient temperature is 30°C.

Test current	Tripping time
$1.13 \times I_n$	$t \geq 1h (I_n \leq 63A)$ $t \geq 2h (I_n > 63A)$
$1.45 \times I_n$	$t < 1h (I_n \leq 63A)$ $t < 2h (I_n > 63A)$
$2.55 \times I_n$	$1s < t < 60s (I_n \leq 32A)$ $1s < t < 120s (I_n > 32A)$

## Influence of ambient air temperature on the rated current

The maximum value of the current which can flow through an MCB depends of the nominal current of the MCB, the conductor cross-section as well as of the ambient air temperature.

The values shown in the table below are for devices in free air. For devices installed with other modular devices in the same switchboard a correction factor (K) shall be applied relative to the mounting situation of the MCB, the ambient temperature and the number of main circuits in the installation (EN 60439-1):

No. of devices	K
2 or 3	0.9
4 or 5	0.8
6 to 9	0.7
> 10	0.6

### Calculation example

Within a distribution panel consisting of eight MCB's 2PC16 with an operating ambient temperature of 45°C, which is the highest temperature at which the MCB can operate without unwanted tripping.

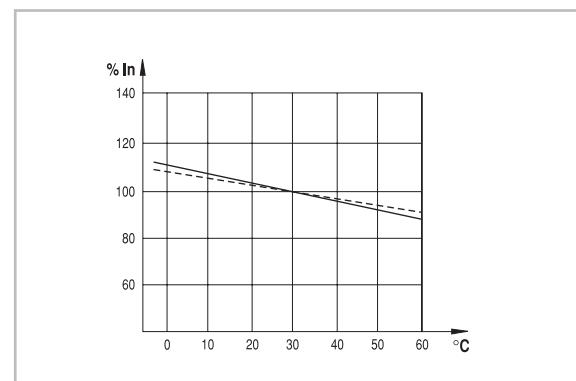

### Calculation

The correction factor K=0.7, for use in an eight circuit installation:  $16A \times 0.7 = 11.2A$

As the MCB is working at 45°C, another factor shall be applied (90% = 0.9):

$I_n \text{ at } 45^\circ\text{C} = I_n \text{ at } 30^\circ\text{C} \times 0.9 = 11.2A \times 0.9 = 10.1A$

The thermal calibration of the MCB's was carried out at an ambient temperature of 30°C. Ambient temperatures different from 30°C influence the bimetal and this results in earlier or later thermal tripping.

## Tripping current as a function of the frequency

All MCB's are designed to work at frequencies of 50-60 Hz, therefore to work at different values, consideration must be given to the variation of the tripping characteristics. The thermal tripping does not change with variation of the frequency but the magnetic tripping values can be up to 50% higher than the ones at 50-60 Hz. For DC current magnetic tripping is 50% higher.

### Tripping current variations

60Hz	100Hz	200Hz	300Hz	400Hz
1	1.1	1.2	1.4	1.5

### Power losses

The power losses are calculated by measuring the voltage drop between the incoming and the outgoing terminals of the device at rated current.

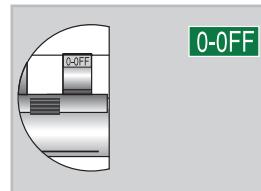

### Power losses per pole

In (A)	Voltage drop (V)	Energy loss Pw (W)	Resistance Z (mOhm)
2	0.55	1.1	275.00
4	0.34	1.35	84.38
6	0.25	1.52	42.22
10	0.16	1.64	16.40
16	0.13	2.1	8.20
20	0.13	2.52	6.30
25	0.12	3.1	4.96
32	0.12	3.8	3.71
40	0.11	4.46	2.79

## Toggle

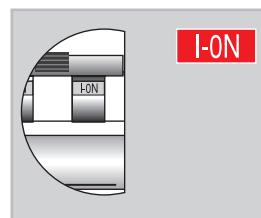

The toggle permits to switch the MCB ON or OFF

Printing on the toggle provides information of the real contact position.

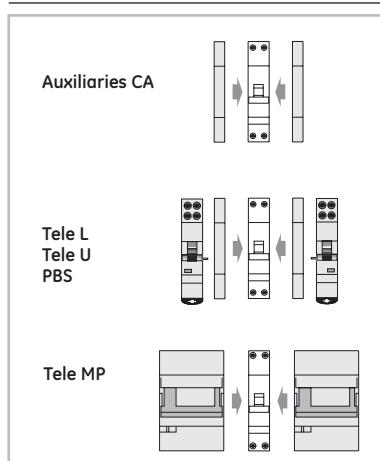

### 0-OFF

Contacts in open position.  
Ensures a distance between contacts > 5mm in the Unibis™ range.

### I-ON

Contacts in closed position.  
Ensures continuity in the main circuit.

**Applications****Approvals / Marking****Add-on devices**

When coupling an add-on device (Tele L, Tele U, PBS) to the MCB, an universal CA auxiliary has to be coupled first as interface.

## Compact MCB's

### Series EPC 45

EN/IEC 60898-1

4500
3

EN/IEC 60947-2

6kA

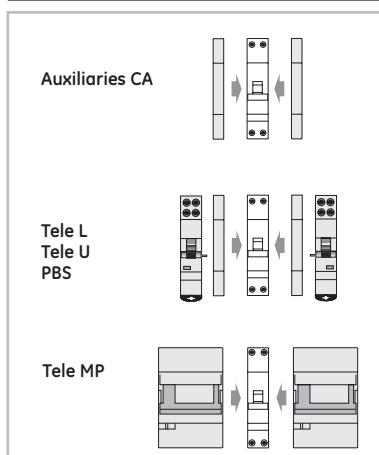

### Applications

### Approvals / Marking

### Add-on devices

When coupling an add-on device (Tele L, Tele U, PBS) to the MCB, an universal CA auxiliary has to be coupled first as interface.

### Performances

Thermal setting $I_{th}$	(A) 2-40
Rated voltage AC $U_n$	(V) 240/415
Minimum operating voltage $U_B\text{min}$	(V) 12
Tripping characteristics	B-C
Selectivity class	3
Mechanical/electrical endurance	20000/10000 <sup>(1)</sup>
Tropicalisation acc. to EN/IEC 60068-2	55°C at 95% RH
Terminal capacity flexible/rigid cable	(mm²) 10-16 <sup>(2)</sup>
Poles	2, 3, 4
Weight	(g/mod) 160

### Short-circuit capacity

#### Acc. to EN/IEC 60898-1

Poles	V	$I_{cn}/I_{cs}$ (kA)
2P	415	4.5
3P	415	4.5
4P	415	4.5

#### Acc. to EN/IEC 60947-2

Poles	V	$I_{cu}$ (kA)
2P	415	6
3P	415	6
4P	415	6

#### DC acc. EN/IEC 60947-2

Poles	$U_n$ (V=)	$I_{cu}$ (kA)
2P	96	4,5

(1) 8000 for 32 and 40A

(2) Also accepting (2x4mm<sup>2</sup>) or (1x4mm<sup>2</sup>)+(1x6mm<sup>2</sup>)
